

Customer ✓ RESPONSIBILITIES CHECKLIST

Are you ready to put on the hard hat? Your new building is just around the corner, but there are some things you'll need to take care of as General Contractor before we start building!

SITE PLANNING

- ☐ **Get in touch** with your state and local ordinances to secure proper zoning, permitting, and confirming adherence to building codes before construction.
- ☐ After your build is scheduled, you will be **responsible for ongoing communications** with all sub-contractors, including payment.

SITE PREP

- ☐ **Land should be cleared** and excavated if necessary through your own sourced contractor.
- ☐ The following **site grading** requirements need to be met for your build site. Contact a local excavating company to get an estimate and see if you meet the requirements:
 - Build pad must be compacted, flat and level with no grass or roots
 - Must be 2-3" within grade
 - Build pad must be 10' larger than your building size. *(For example, a 30'x40' building must have a 40'x50' building pad.)*
- ☐ **Call 811** to have utility lines marked prior to construction date.

CONCRETE

**only relevant if you ordered a concrete foundation*

- ☐ **Order gravel** and have it dumped next to building pad.
 - Must be 3/4" rock
 - Requires enough rock to spread a minimum of 5' out from perimeter of the new building (approx. 20 tons of gravel needed every 1,000 sq. ft.) *Further research may be needed to ensure accuracy.*

ADDITIONAL NOTES

- ☐ **Cleanup** of trash and debris is the customer responsibility. It's recommended to place a trash bin or roll off next to the build site. *Extra material is the property of Summertown Metals and will be picked up after installation.*
- ☐ **Call us** immediately at **(931) 796-7117** if you live out of the state you're building in and need advance notice of ship dates.

POST FRAME CONSTRUCTION GUIDE

Your Step-By-Step Guide for Building a Post-Frame Building with Summertown Metals

1 DESIGN + PLANNING

Choose from one of our **pre-designed building kits**, or work with a Building Specialist to create a **custom layout** that fits your needs. We'll help you design a building that looks great and functions for the long haul.

Popular Add-ons: Porches, Lean-tos, Rock Wainscoting, Custom Openings, and more.

View our building kits to see if one fits your vision or get inspiration for your custom project.

Learn more online: www.summertownmetals.com/building-kits

2 GET A QUOTE

Once you have a general idea of what you're looking for, our team will create a **custom quote** based on your building's size, style, features, and location.

We'll walk you through what's included, what it costs, and answer any questions you have along the way—no pressure, just clear numbers and expert help.

Want a ballpark price first? Use our online 3D Builder to explore cost estimates before you even pick up the phone.

Design your building online: www.builder.summertownmetals.com

3 SECURE FINANCING

If you're planning to finance your building, **we've partnered with trusted lenders** who understand post-frame construction and can help you find the right loan for your project.

Financing can be simple when you're working with the right team.

Visit our Financing page online to explore lender options and get pre-qualified.

Learn more online: www.summertownmetals.com/financing

4 SIGN CONTRACT

Once your design and quote are finalized, we'll prepare a contract outlining all the details of your building package—materials, pricing, timelines, and any custom upgrades you've selected.

When you're ready to move forward, **signing the contract officially puts your project on our schedule**. This step locks in your pricing, triggers material prep, and allows us to begin coordinating delivery and contractor assignment.

It's not just paperwork—it's your green light to break ground.

A non-refundable materials deposit is due at signing.

5 PREP YOUR SITE

While we're preparing your building kit, **you'll need to prepare your build site**.

That includes:

- Acquiring building permits
- Dirt work and leveling
- Access for delivery trucks and construction crews

We partner with trusted contractors in many regions and are happy to recommend one if needed.

Learn more online: www.summertownmetals.com/site-prep

6 CONTRACTOR ASSIGNED

We'll assign a **trusted independent contractor** from our network of vetted, reliable professionals 7-10 days after your contract is signed. Your contractor will coordinate with our team directly so we handle the build from start to finish—saving you the hassle of sourcing your own crew.

We'll let you know when we've picked out your personal building team.

7 DELIVERY DAY

We deliver all building materials directly to your job site, **bundled and ready to go**. Each kit is pre-engineered and labeled for smooth installation—whether you're DIY-ing or using a contractor.

You'll receive hardware, framing materials, metal panels, trim, and any upgrades included in your design.

Remaining materials cost is due upon delivery.

Our materials and craftsmanship are set apart by their quality.

Learn more online: www.summertownmetals.com/summertown-advantage

8 CONSTRUCTION BEGINS

The building goes up—usually starting with posts and framing, then trusses, metal roofing and siding, and optional elements like:

- Insulation
- Windows and Doors
- Concrete Slabs or Footers*

*Concrete is an optional upgrade. Customer is responsible for providing rock for finish grade work before concrete can be poured.

Depending on the size of your building, a payment draw may be required at this time.

The cost of concrete is due upon completion.

9 FINISHING TOUCHES

After the structure is complete, **notify our team** and the installers will handle any final touches like ...

- Garage Doors
- Rock Wainscoting*

*Our rock wainscoting is an upgrade with our rock sourced from Centurian Stone, a Nashville-based company.

Your building comes together and takes its final shape.

10 PROJECT COMPLETE

You now have a **high-quality, fully engineered building** designed to stand the test of time—backed by Summertown Metals' service and support.

Labor cost is due upon completion

Note: Summertown Metals specializes in high quality post frame buildings with concrete foundations and exterior finishes. We do not provide interior finishing for post frame buildings such as interior framing, electrical, plumbing and/or excavation.

LET'S START *Building*

Ready to take the next step?

Scan the QR code to schedule a time with one of our Building Specialists. Whether you're dreaming, planning, or ready to roll—we'll help you get there.

QUALITY ISN'T WHAT WE SAY. IT'S WHAT WE DO.

Premium Grade Lumber

- ✓ **Superior Load-Bearing Capacity**
Our lumber meets the **highest industry standards** meaning it's denser, straighter, and more uniform, resulting in super load-bearing capacity and a stronger frame resistant to warping.
- ✓ **Consistent Quality You Can Count On**
Our lumber goes through **rigorous processing** to ensure fewer knots and flaws, providing a more reliable and longer-lasting structure that does the job - beautifully.
- ✓ **Treated for Toughness**
Our lumber is **fully treated** for above-ground and ground-contact exposure, protecting it from decay, insects, and moisture.

#1 Grade Metal

- ✓ **Built for Real-World Durability**
Our metal meets the **highest industry standards** for thickness, tensile strength, and flatness, making it structurally sound and more reliable under stress with less risk of dents, bending, or buckling.
- ✓ **Fade-Resistant Finish**
Our painted panels feature **AkzoNobel's industry-leading coatings**—crafted with over 200 years of expertise to maintain **vibrant color and resist chalking** even in the harshest sun and weather.
- ✓ **Peace of Mind That Lasts**
With painted panels covered by **AkzoNobel's limited lifetime warranty** and galvalume backed by a 25-year **rust-through warranty**, you can feel confident your building is protected by finishes made to endure.

Engineered Screw Patterns

- ✓ **Superior Wind Resistance**
Our panels undergo rigorous testing for wind shear strength and are **engineered with a 9° screw pattern** to reduce uplift in high winds. This ensures tighter, more secure panels that offer enhanced storm protection.
- ✓ **Reduced Panel Movement and Noise**
Closer spacing minimizes the flex and movement of metal panels over time, which reduces wear, squeaks, and creaking often caused by thermal expansion or strong gusts.
- ✓ **Increased Longevity of Fasteners**
A **tighter pattern** distributes the load more evenly across the structure, reducing stress on individual screws and helping prevent premature loosening, leaks, or damage.

UL Classified Roofing Systems

- ✓ **Built to Protect, Tested to Endure**
UL 790 and UL 2218 classifications mean your standing seam, tuff-rib, or PBR metal roof is **tested to resist fire and hail**—so you get long-term protection, built-in durability, and peace of mind when the unexpected hits.
- ✓ **Save on Insurance Costs**
Choosing **UL 2218 Class 4 metal roofing** can lower insurance costs. Many providers offer discounts for impact-resistant roofs—turning your investment into lasting savings for your home, farm, or business.
- ✓ **Simplify Permits and Inspections**
UL classifications help you **meet local and state building codes**—keeping your project moving without delays. Recognized safety standards make inspections smoother and simplify code compliance right from the start.

Engineer Stamped Trusses

- ✓ **Stronger than the Rest**
Our knee-braced steel trusses feature **minimum 1/8" thick steel**, and our wood trusses use **2x6 top and bottom chords**—exceeding industry standards with unmatched strength, rigidity, and load-bearing power.
- ✓ **Safety in Every Connection**
We don't just build trusses—we fortify them. Every truss includes **hurricane clips and joist hangers** as standard, locking your structure together with industrial-grade precision and reliability.
- ✓ **Storm-Ready by Design**
Engineered to withstand high winds, shifting weather, and extreme conditions, our trusses are crafted to protect what matters most—because you don't get a second chance in a storm.

Framing with Integrity

- ✓ **Decay and Insect Resistant**
Not only are our in-ground posts pressure treated, but we also use **stronger .60 CCA (copper chrome arsenate) ground-contact treated lumber for our bottom bands** to protect your building above-ground.
- ✓ **Reinforced Stability**
With **solid corner bracing and head lock screws**, your building resists twisting and shifting, keeping walls square and aligned through years of use and weather challenges.
- ✓ **No Corners Cut**
From purlins to girts, you don't have to worry about the **structural integrity** of your building being compromised because of our competitive prices. We never sacrifice quality and we don't upcharge for it.

Unmatched Post Security

- ✓ **Rust-Resistant Strength**
Rust-resistant and built for the long haul, our **galvanized lag bolts** ensure a durable, lasting connection that won't degrade—so your structure stays secure, year after year.
- ✓ **A Foundation That Holds**
Each post rests on wide, high-strength **16" composite footer pads** that spread out the weight—helping prevent settling and keeping your building level and stable over time.
- ✓ **Posts that Won't Budge**
Galvanized lag bolts are driven through the post and into the concrete to form a **locked-in connection**—firmly anchoring the post to **resist uplift** and lateral forces. These bolts meet engineering requirements, ensuring the post can't slide out in high winds.

Durable Reinforced Reflective Barrier

- ✓ **Reflects Heat, Reduces Cooling Costs**
Summer Shield's reflective foil surface **blocks up to 95% of radiant heat**, keeping metal buildings cooler and more energy efficient. This helps reduce cooling costs, improves occupant comfort, and eases the load on HVAC systems—especially in hot climates.
- ✓ **Reinforced for Long-Term Durability**
Summer Shield **resists tearing** and general wear better than bubble or foam alternatives. It stands up to rough handling during install and delivers long-term performance in agricultural, commercial, or high-wind environments.
- ✓ **Moisture Stops Here**
Summer Shield works as both a radiant barrier and a **vapor barrier**—helping prevent moisture due to humidity that increases the risk of mold, corrosion, or insulation failure over time.

REBUILDING ISN'T IN YOUR BUDGET

YOU DON'T HAVE TO CHOOSE BETWEEN **AFFORDABILITY** AND **QUALITY** WITH US
